Description:

There are many types of bonding that make up our world. During this unit we will look specifically at Ionic bonds. Ionic compounds are generally formed from metal and a non-metal.

At the end of this unit students will be able to:

- 1) Name binary ionic compounds
- 2) Name ionic compounds using roman numerals
- 3) Name ionic compounds with poly atomic ions
- 4) Identify ionic compounds based on given formula
- 5) Identify ionic compounds based on characteristics and properties

“Engage students with self assessments, graded quizzes, and discussion boards, directly in-line with the content for maximum impact. Skyepack supports videos, images, documents, audio, and even *customized HTML*.”
